Memory Support Specification

Registered Type
- DDR3 1066/1333 MHz
- Capacity: 2, 4, 8 GB
- Voltage: 1.5 V
- Maximum: 32 GB (8 GB x 4 DIMMs)

Unbuffered Type
- DDR3 1333 MHz
- Capacity: 2, 4 GB
- Voltage: 1.5 V
- Maximum: 16 GB (4 GB x 4 DIMMs)

Memory Population

The systems have six DIMM slots. The DIMM slots support DDR3-1333 registered/unbuffered ECC memory modules. The CPU provides two memory channels that support two UDIMM modules or three RDIMM modules per channel. Depending on the type of processor installed, the system can support up to six RDIMM modules for Intel® Xeon® 3400 series or four UDIMM modules for the Intel® Pentium® processor. Detailed memory population guidelines are shown in the table below:

For the system to function, DIMM modules must be installed following the slot sequence listed below. DIMM module of the same type, size and manufacturer must be installed in the same colored DIMM slots.

<table>

</tr>
</tbody>
</table>

NOTES:
1. Place DIMMs in "X" location.
2. DIMM population must correspond to the above table.
3. DIMM modules support 2 GB and 4 GB DIMMs.
4. DIMM modules support 8 GB DIMMs.
5. Do not mix UDIMMs with RDIMMs.
6. Use single rank and dual rank RDIMMs only for configuration D.
7. RDIMM is only supported by Intel® Xeon® X3400 series processor.
## Memory Identification

Generally, there is memory information printed on the label of the DIMM, but different vendors may have different formats. For example:

- 4GB 2Rx4 PC3-10600R xx xx xxx

1. **Density**
   - 2GB, 4GB, 8GB, 16GB
   - Intel® Xeon® 3400 series processors support DIMMs organized by 1Gb, 2Gb or 4Gb DRAM chips

2. **Rank**
   - 1R = Single Rank
   - 2R = Dual Rank
   - 4R = Quad Rank

3. **Bit Organization**
   - This platform supports x4 and x8
   - Note: It is not recommended to mix DIMMs with different bit organizations in one system

4. **Speed**
   - PC3 – 6400 => DDR3- 800
   - PC3 – 8500 => DDR3- 1066
   - PC3 – 10600 => DDR3- 1333
