Asset Tagging & Electronic Tag and Test

Underpinned by more than 20 years of experience servicing some of Australia's largest government, education and corporate institutions, Acer Managed Services offer end-to-end, tailored solutions that meet your business needs.

Asset Tagging

Acer can supply and affix asset labels and burn in the asset number into the built-in operating system (BIOS). This can be applied during local assembly and test operations in Australia, and we will provide corresponding bar-coded asset labels to the external cartons of products.

Through this process, Acer will use its robust asset system to record, manage and control relevant information about the supplied equipment to ensure full visibility over the hardware fleet. We strive to capture as much data as possible, and asset systems data can include:

- asset number
- serial number
- component list
- date of manufacture
- date of equipment and/or service delivery
- delivery location
- price
- location of equipment (site, floor, room, desk)
- warranty end date
- MAC address

Electronic Tag and Test

As part of Acer's ability to service the full asset lifecycle locally, we are a certified provider of electronic tag and test services, to ensure the hardware used by your organisation is safe and compliant. These services are undertaken in our Integration Centre in Homebush West, Sydney. All of our in-house tag and test processes were developed to ensure every electrical product – including power cords – meet Australian standards. We then supply and fit the items with a "Tag and Test" label which includes the date tested and when the device is due for its next test.

To find out more about Acer's Asset Tagging & Electronic Tag and Test services and wider Managed Services offering, email aca.pmd@acer.com or phone (02) 8762 3000.
