

abUC

A revolution in business communications

Keeping up to speed with the ever-changing communication needs of an organization isn't always easy with hardware-based PBX systems. abUC is a revolutionary alternative that takes the approach of a Software-defined communication service (SDS) and offers advantages in:

- Scalability
- Security
- Adaptability
- Affordability
- Compatibility
- Usability

and lets you go beyond conventional PBX capabilities to embrace the next-level Enterprise Communication 4.0 in the future office.

A revolution in business communications

Superior manageability

Change is the only constant. With abUC, IT administrators will enjoy a scalable and versatile architecture that can easily grow and adapt with your organization's ever-changing needs.

Greater security

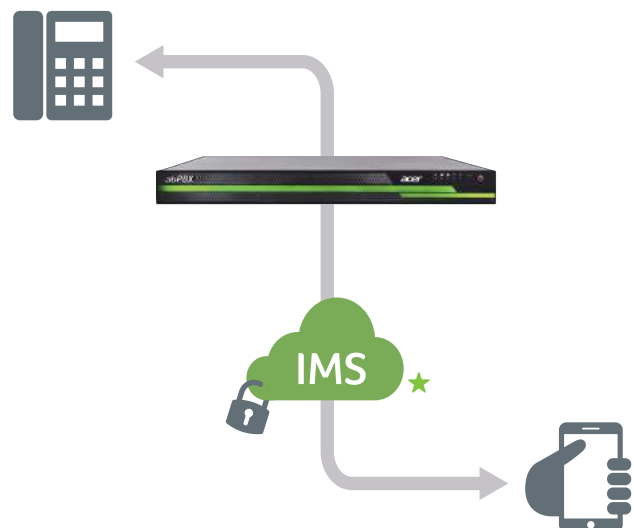

In an era where office and personal communication channels are blurring, security is increasingly becoming an issue. Instead of discouraging the use of certain communication tools, abUC embraces them, balancing the needs of employees with the security requirements of an organization.

Lower total cost of ownership

abUC requires less hardware than similar systems and has a highly adaptable modular design. This combination will drastically reduce the cost of your initial investment and will save you future dollars with quick and easy upgrades.

Increased productivity

abUC offers your employees a platform that is easy to use, increasing productivity across the board. It does this by going beyond traditional office communications and integrating other channels and tools already in use, such as mobile devices.

★ IMS Multimedia Telephony is an end-to-end verified network solution, allowing advanced multimedia services and content to be delivered over broadband networks that use IP technology.
